Supported by:

Implemented by:

Zika Zine Comic Nepali version published

The GLOBE Program

School Garden and Open Space Management Program

- **Number of data points entered into GLOBE database**
4165 (1021)
- **Number of IVSS student reports - None**
- **Connections with local public health officials – 3 but not continued , now coordination with semi government health institution who are working health issues so could promote mosquito protocol**

Highlight: Strategy

- **Strategic partnerships,**
 - ECCA has integrated with other projects and programs and trained all staffs to integrate the GLOBE protocols including mosquito in school programs.
 - Dialogue has been started Red Cross Society and Municipalities
- **Innovations –**
Linking with other youth training program and other school training programs like school **gardening programs, WASH etc**

Highlight Strategy

- **Collaborations/connections to Peace Corps, -**

ECCA had dialogues and meetings with Peace Corps and its volunteers but could not go ahead as their priorities were changed to food securities. .

For increasing health technical person support ECCA has met many health officials but they are keep on changing after the province system. It will be problem till new structure finalized. As in many part of Nepal the many people were affected with **Dengue** diseases, ECCA has developed the project and proposed to **KMW** for preparing school stakeholders for the precaution from mosquito diseases.

- **Events and organizations leveraged, etc.**

School Clubs had done rally on mosquito disease precautions in East Nepal during Dengue threat in their areas.

Part Two: Project Plans

- **Note: Here you will describe your goals to accomplish by the end of July 2020, including:**
- **# of Workshops Planned (including # of people to train)-**
 - 5 LMW with 25 participants
 - Integrating GLOBE protocols in ECCA regular youth training programs – 2 x 25
- **Goals for increasing outreach to public health community to enlarge your country's community/public health network**
 - Increase communication with health offices and try to create interest on this issues.
- **Connecting with Peace Corps** – Attempt will be continued but for this GIO should advocate to integrate it in their volunteer school programs
- **Plans for including MHM Protocol Bundle into CMTs and LMWs**
 - It is already tried in previous CMT and LMW integrating different other GLOBE protocols mainly atmosphere, hydrology and planning to add soil

Ideas for sustaining activities beyond 2020

- **Ideas for sustaining activities beyond 2020** (examples include engaging strategic partners, encouraging and supporting IVSS student reports, using MHM Protocol Bundle at GLOBE training workshops, maintaining network with public health officials, etc.)
- Increase network with public health officials once the province structure will be stable till then possibly with semi government , NGOs that are working in health will be collaborated.
- Increase GLOBE training workshop integrating in other ECCA school and youth training program
- ECCA will give priorities on IVSS in school program
